Fawaz copper tube - share of the Kuwait market, 2018 to 2026

HS 7411.10-00, copper tubes and pipes of refined copper. Tonnes. Prepared 13 November 2026.

Year	Total Kuwait imports	Coolex and other factories	Other applications	Direct imports by large companies	Addressable trading market	Our tonnes sold	Our share of addressable market	Our share of total imports
2018	2,376	736	584	475	**582**	117	**20.1%**	4.9%
2019	2,624	812	645	525	**642**	128	**19.9%**	4.9%
2020	2,067	640	508	413	**506**	177	**34.9%**	8.5%
2021	3,000	929	738	600	**733**	114	**15.5%**	3.8%
2022	3,815	1,181	938	763	**933**	172	**18.5%**	4.5%
2023	3,443	1,066	847	688	**842**	199	**23.7%**	5.8%
2024	4,252	1,316	1,045	851	**1,040**	173	**16.6%**	4.1%
2025	4,038	1,250	993	808	**987**	158	**16.0%**	3.9%
2026 forecast	*2,692*	*834*	*662*	*538*	***658***	*166*	***25.2%***	*6.1%*

- Total imports: UN Comtrade, Kuwait as reporter, HS 7411.10. 2026 is not published yet.
- 2026 is a forecast, not data. The Strait of Hormuz closed to commercial shipping about 1 March 2026 and shipments started reaching Kuwait again from August, still with delays. The year is taken as eight months of the 2025 import rate, that is, four months lost. Our own 2026 tonnes are counted to 11 November and annualised.
- Coolex is taken at 1,000 t in 2025 (your estimate of 800 to 1,200 t), other factories at 250 t and non-AC applications at 993 t (about 25% of imports). All three move each year in proportion to total imports. They are assumptions, not statistics.
- Large companies that import for themselves, and other volume that never reaches the traders, are taken at 45% of what remains after the factories and other applications. This is set so the result agrees with a bottom-up estimate of installation demand (about 900 to 1,000 t in 2025).
- Our tonnes: 2025 is counted item by item from the stock movement. 2018 to 2024 are estimated from revenue at an average gross margin of 17% on the selling price; 2018 is eight months annualised.
- 2020 and 2021 are the least reliable years: the Covid dip and the LME spike distort the revenue-based estimate.
